

The Propper ProExpose™ Protein Detection Test

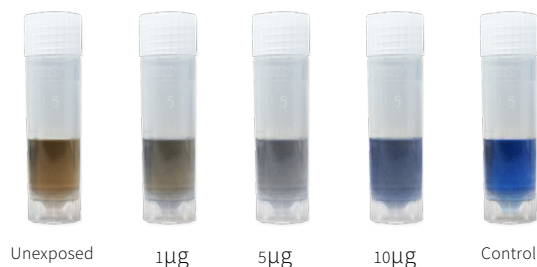

The Propper ProExpose™ Protein Detection Test

Often biological soil and food residues left behind by insufficient cleaning are invisible to the naked eye, especially inside lumens and other tubular structures.

Thorough cleaning to completely remove these residues is required in various industries. Verifying that adequate cleaning has taken place can be a daunting task.

This protein test utilizes a simple dye-binding method for protein detection that results in a clear, easy-to-read color change. At the start of the test, the solution is brown then turns blue when protein is detected. If the color remains brown, you can be assured that cleaning was sufficient for the swabbed area. Aside from simple protein detection, the test yields semi-quantitative results: the higher the concentration of protein present in the solution, the darker and more saturated blue color appears in the reagent vials.

Swirl the swab in the reagent vial for 5 seconds and observe the result. The test is sensitive to 1µg of protein and no incubation is required.

Reorder No.	Product	Contents
PR26923300	ProExpose™ Short Swab Protein Test	30 Short Swabs 3" 30 Reagent Vials, 2 Control Strips
PR26923400	ProExpose™ Protein Test Kit	3 Long Swabs 2.8mm x 2.5m, 1 Short Swab 3" 4 Reagent Vials, 1 Control Strip
PR26923500	ProExpose™ Protein Test Kit	3 Long Swabs 1.9mm x 2.5m, 1 Short Swab 3" 4 Reagent Vials, 1 Control Strip
PR26923600	ProExpose™ Protein Test Kit	3 Long Swabs 3.7mm x 2.5m Swab, 1 Short Swab 3" 4 Reagent Vials, 1 control strip
